

Cyber Threat Intelligence Dashboard

- Internship Domain: Cybersecurity
- Internship Duration: 1 Month
- Organization: Elevate Labs
- Name: Prince JAT
- Role: Cyber Security Specialist
- Location: Remote
- Date: July 2025

1. Introduction

- The Cyber Threat Intelligence Dashboard is a Django-based web application built to help identify and visualize publicly available data (OSINT) linked to digital assets like email addresses, domains, usernames, or phone numbers. This project combines automation and simplicity to help security teams get quick insights during early threat investigations.

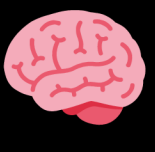

● Objectives

- Build a dashboard to perform passive reconnaissance using OSINT tools.
- Integrate tools like theHarvester, whois, emailrep, and shodan.
- Enable search by different identifiers — username, email, domain, or mobile number.
- Display results in a clean UI with history tracking.
- Add PDF report export functionality.

Tech Stack Used

- Frontend: HTML, CSS, Bootstrap, JavaScript
- Backend: Django (Python), REST APIs
- Tools Integrated:
 - theHarvester – passive recon
 - emailrep.io – email reputation
 - whois – domain info
 - shodan – internet-connected devices
- Database: SQLite
- Others: PDF generation module (like xhtml2pdf)

Features Implemented

-  Search by Email, Domain, Username, or Mobile
-  Result Display in readable format
-  Search History Tracking
-  Export Result as PDF
-  Simple UI with hacker-style dark theme
-  Fully responsive design

How It Works

- User Inputs a target (email/domain/username/number)
- Backend script triggers tools like theHarvester, whois, etc.
- Results are parsed and displayed on frontend
- Option to Download as PDF
- All searches are logged in history

OSINT Intelligence Lookup

Domain Status: clientTransferProhibited <https://icann.org/epp#clientTransferProhibited>

Domain Status: clientUpdateProhibited <https://icann.org/epp#clientUpdateProhibited>

Domain Status: serverDeleteProhibited <https://icann.org/epp#serverDeleteProhibited>

Domain Status: serverTransferProhibited <https://icann.org/epp#serverTransferProhibited>

Impact & Learning

- Real-world implementation of OSINT tools
- Understood integration of CLI tools in Django
- Improved skills in Python, APIs, and automation
- Strengthened knowledge of threat reconnaissance
- Enhanced understanding of data parsing and UI responsiveness

Conclusion

- This project helped me understand the practical side of cybersecurity threat intelligence. The dashboard is designed for ethical use and educational purpose, aimed at learning how attackers think — so defenders can be one step ahead.
